Welcome to the Fall Meeting of the International College of Integrative Medicine.

This meeting's topic is about women's health, being 51% of the world's population we can not forget our uniqueness our contributions and our sensitivities.

This fall program includes great topics and great speakers, we will learn about the management of fibroids using an integrative approach, we will really apply great guidelines, so no more unnecessary hysterectomies will be carried out!

Dr. Alan Gaby will present to us on Osteoporosis, will give us a practical perspective and give us the scientific information in regards to important nutrients beyond calcium and vitamin D.

This is just an example of what awaits us in Detroit. As usual the organizing committee has chosen superb venues and we promise that the meeting will not only have the highest degree of scientific, practical information that you can apply as soon as you return to your offices, but it will also be a great opportunity to meet your friends and enjoy evenings of friendship and entertainment.

WE WELCOME ALL OF YOU TO DETROIT AND REMEMBER:

DON'T FORGET THE LADIES!

Jeannette Soriano MD
